## PROFILE

---

When I was young I was evolved by software and hardware development. Then I decided to learn about computer science. At the second thought software and hardware, engineering was so promising for my younger self. I studied at the National University of Mongolia and learned what I was passionate about. When I was studying at the National University of Mongolia my whole world and thoughts changed. Then I tried to be a creative thinker and adapted to software development and working with various data structures.

## EDUCATION

---

**BE in National University of Mongolia, Cumulative GPA: 3.1, Major GPA: 4** *Sep 2015 - Jun 2019*

**MS in Changwon National University** *Mar 2021 - Present*

- Collected materials needed for training.

**Member of Incoming Global Volunteer at AIESEC** *March 2017 - Aug 2017*

- Learned how to interact with international people and connect with my team.

## EXPERIENCE

---

**Research Assistant at South Korea** *March 2021 - Present*

- Identification of Seed Coat Sculptures using Deep Learning
- Pre-processed seed image using MATLAB

**Front-End developer at DDISH LLC, Mongolia** *Aug 2019 - Feb 2021*

- Developed Call center system using ReactJS
- Renewed previous PHP Symfony framework to ReactJS (Front-end)

**Software Engineer at DDISH, Mongolia** *June 2019 - Aug 2019*

- Developing Call center of KPI automation module using PHP Symfony framework
- Solved hand-by-hand job to automation

**Intern at Machine Learning UB, Internship** *June 2018*

- Worked on Natural Language Processing - Mongolian WordNet developing using Java

- Found between string similarity and distance-based cosine Similarity

## **ACHIEVEMENTS**

---

- 10th international conference on frontiers of information technology applications and tools (FITAT 2017) - Color blind correction of the poster session
